

Curve Cutter. Making curved trim for tower rooms, doors and windows, and wraparound porches can be a pain, and accurately estimating the time it takes to make this stuff can mean the difference between going on vacation with the family and going broke. If you don't have the time or equipment to efficiently make your own curved moldings and millwork, you might contact B.H. Davis Company. This *Radius Millwork Specialist* can make just about any curved trim you can imagine and some you can't. The company has a huge selection of stock knives

and makes custom profiles, as well. Check out the website to learn an easy way to make accurate templates, see stock profiles, and view examples of the work.

B.H. Davis Company, 860/923-2771, www.curvedmoldings.com.
